WHO WE ARE

420Coin is a social impact cryptocurrency raising funds for medicinal cannabis research. Born out of tragedy, founders Reese Little and Sami Shehadeh created 420Coin after their friend Anthony, an accomplished freestyle skier, was paralyzed from the neck down in a skiing accident. When doctors refused to provide Anthony with medicinal cannabis, Reese and Sami started searching for a solution to provide Anthony and other ill and injured people with an opportunity to receive alternative treatment and renewed hope in life.

CONNECT WITH US

- Follow 420Coin on Instagram

- Follow 420Coin on TikTok

REESE LITTLE

Reese brings a passion for business and investing to 420Coin. As president of three collegiate organizations, Reese has been recognized as a natural leader committed to diversity, equity, and inclusion.

SAMI SHEHADEH

Sami is an accomplished coder with a passion for investing and fitness. He brings years of coding experience to the 420Coin team honed while working for multiple companies, including RWJ Barnabas Health.

ABOUT US

on the Ethereum blockchain offering investors a unique opportunity to support groundbreaking medicinal cannabis research.

MISSION

We aim to empower investors and cannabis enthusiasts with a marketable token that capitalizes upon the explosive growth of cryptocurrency to create social impact by raising funds for medicinal cannabis research.

VISION

We envision a world where cannabis is seen as a viable alternative to dangerous, addictive prescription narcotics.

ASSURANCE

Given the growth of the cannabis industry, interested parties can clearly observe how 420Coin is fulfilling its mission and vision by helping fund research a substance that has been in the dark for almost a century.

CRYPTOCURRENCY 101

THE BASICS OF CRYPTOCURRENCY

Cryptocurrency does not exist in physical form and is typically not issued by a central authority. Rather, this digital asset is typically used in decentralized control as opposed to centralized digital currency and central banking systems.

When cryptocurrency is minted or created prior to issuance, or being issued by a single issuer, it is generally considered centralized. When implemented with decentralized control, each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database.

The most popular cryptocurrencies by market capitalization are Bitcoin, Ethereum, Bitcoin Cash, and Litecoin. Other well-known cryptocurrencies include Tezos, EOS, and ZCash. Some are similar to Bitcoin. Others are based on different technologies, or have new features that allow them to do more than transfer value.

HOW CRYPTOCURRENCY WORKS

Bitcoin is the first and most well-known, but there are thousands of types of cryptocurrencies. Many, like Litecoin and Bitcoin Cash, share Bitcoin's core characteristics but explore new ways to process transactions. Others offer a wider range of features. Ethereum, for example, can be used to run applications and create contracts. All four are based on an idea called the blockchain, which is key to understanding how cryptocurrency works.

At its most basic, a blockchain is a list of transactions that anyone can view and verify. The Bitcoin blockchain, for example, is a record of every time someone sends or receives Bitcoin. This list of transactions is fundamental for most cryptocurrencies because it enables secure payments to be made between people who don't know each other without having to go through a third-party verifier like a bank.

The blockchain ledger is split across all the computers on the network, which are constantly verifying that the blockchain is accurate. This means there is no central vault, entity, or database that can be hacked, stolen, or manipulated.

WHY INVEST IN CRYPTOCURRENCY?

Online exchanges like Coinbase have made buying and selling cryptocurrencies easy, secure, and rewarding.

- It only takes a few minutes to create a secure account, and you can buy cryptocurrency using your debit card or bank account.
- On Coinbase, you can earn 1% APY that's much higher than most traditional savings accounts
- Unlike stocks or bonds, you can easily transfer your cryptocurrency to someone or pay for goods and services
- Millions of people hold bitcoin and other digital currencies as part of their investment portfolios

FUNDAMENTALS

Initial // 50 million tokens

• When the circulating supply hits 2% (1,000,000 tokens) or fewer, 5 million 420Coin will be added to the circulating supply plus liquidity from 5 million tokens to avoid slippage.

Phase 1 // 50 million tokens

- Deploy 420Coin
- Reach \$50,000 in liquidity to initiate Phase 2

Phase 2

- 2.5% of \$50,000 liquidity will be liquidated and donated to a cannabis research foundation of 420Coin's choosing
- When liquidity doubles, 2.5% liquidity will be donated to a cannabis research foundation of 420Coin's choosing
- Reach \$800,000 in liquidity to initiate Phase 3

Phase 3

- We will donate 2.5% of liquidity every time liquidity gains \$420,000
- For example, \$800,000 + \$420,000 = \$1.22M * 2.5% = \$30,500 donated to to a cannabis research foundation of 420Coin's choosing
